

Learning With AI

A folder of plain text that turns your class material into clean summaries, flashcards, and exam style practice questions, all filed by subject. No code. Built for Claude.

WHAT IT IS

This is not an app and there is nothing to install. It is a plain folder of text files. You answer a short intake, and an AI reads your material and builds you a personalized study system. If you can make a folder and type a sentence, you can use it. It works for a student in any field, not one specific major.

HOW IT WORKS

The setup starts with a form, not with technology. You tell the system your name, your field, your current subjects, and how you like to study. From those answers it sets up a folder for each subject, loads a ready made field pack, and personalizes a simple dashboard. It ships with packs for accounting, engineering, and nursing, and it can build a new pack for any other field on the spot.

THE THREE SENTENCES THAT RUN IT

After setup, the whole routine is three plain sentences:

- Drop your class material into the `00-inbox` folder.
- Say `Make my study guides from the inbox`.
- Study what comes back, filed by subject.

The summaries, flashcards, and practice questions land in their own folders, and your original files are tucked into an archive so the inbox stays clean.

WHY IT WORKS

An AI on its own is a brilliant stranger. It knows a great deal in general and nothing about you in particular. What turns it into your system is structure and context, and a folder of plain text files is the simplest way to give it both. The folder names your subjects. The files hold your material and your goals. So the AI works inside those lines instead of guessing. There is also good evidence behind it: a Harvard study found students learned more than twice as much in less time with a well structured AI tutor, and the flashcards and practice questions this system makes are retrieval practice and spaced repetition, among the most reliable study methods ever measured.

WHAT IS INSIDE THE DOWNLOAD

- **READ ME FIRST**, a plain walkthrough for a total beginner
- **INTAKE**, the short setup form
- **Field packs** for accounting, engineering, and nursing
- **The instructions** the AI reads to build your system
- **Subject and output folders**, ready to fill
- **A simple dashboard** and a study guide walkthrough
- **Study templates** for summaries, flashcards, and more
- **An organize anything starter**, for life beyond school

HOW TO START

- 1 **Unzip the folder** somewhere you can find it, like your Desktop.
- 2 **Open INTAKE and answer the questions**, or just tell the AI your answers out loud.
- 3 **Point your AI at the folder** and say **Build my study system from my intake**.
- 4 **Drop, ask, study**. Add material to the inbox, ask for your study guides, and review what comes back.

Not a student? Open the organize anything folder in the download. It is the same idea, stripped down, for a job hunt, a household, a small side business, or a project. Fill in its short intake and say build my system from my intake.

This is a study aid, not professional advice. Always confirm important facts against your own materials and instructors. The barrier was never code. It was structure, and now you have it.
